

DOCUMENTATION | Daily Data Upload Monitoring Tracker

Prepared by:	Bernadette Semira
Role:	Aspiring Data Specialist
Tools Used:	Snowflake, Gsheet, CSV file, Basic SQL
Google Sheet Tracker	 Daily Data Upload Monitoring Tracker

Creating new worksheet / database “data_operations_demo”

```
CREATE DATABASE data_operations_demo;  
  
USE DATABASE data_operations_demo;  
  
CREATE SCHEMA data_operations_demo.monitoring;
```

Creating the Data Table “<Database name> .monitoring.daily.uploads”

```
CREATE OR REPLACE TABLE data_operations_demo.monitoring.daily_uploads (  
    file_name STRING,  
    upload_date DATE,  
    source_system STRING,  
    status STRING,  
    record_count INTEGER,  
    notes STRING  
);
```

Insert Sample Data

```
INSERT INTO data_operations_demo.monitoring.daily_uploads  
    (file_name, upload_date, source_system, status, record_count, notes)  
  
VALUES  
    ('accounts_0514.csv', '2026-05-14', 'Custodian System', 'Success', 1240, 'Complete'),  
    ('portfolio_0514.csv', '2026-05-14', 'Portfolio PMS', 'Failed', 0, 'Missing file'),  
    ('transactions_0514.csv', '2026-05-14', 'Bank Feed', 'Success', 3520, 'Complete'),  
    ('clientdata_0514.csv', '2026-05-14', 'CRM Platform', 'Success', 890, 'Complete'),  
    ('holdings_0514.csv', '2026-05-14', 'Investment Feed', 'Delayed', 0, 'Late upload');
```

View Data

```
SELECT *
FROM data_operations_demo.monitoring.daily_uploads;
```

RESULT IN TABLE VIEW:

Results (3 minutes ago)

Table Chart Pivot

5 rows 25ms

	FILE_NAME	UPLOAD_DATE	SOURCE_SYSTEM	STATUS	RECORD_COUNT	NOTES
1	clientdata_0514.csv	2026-05-14	CRM Platform	Success	890	Complete
2	transactions_0514.csv	2026-05-14	Bank Feed	Success	3520	Complete
3	holdings_0514.csv	2026-05-14	Investment Feed	Delayed	0	Late upload
4	accounts_0514.csv	2026-05-14	Custodian System	Success	1240	Complete
5	portfolio_0514.csv	2026-05-14	Portfolio PMS	Failed	0	Missing file

AFTER SUCCESSFULLY INSERTING DATA, we want to filter out everything using different queries depending on the set of data or qualifications we're looking for.

FAILURE MONITORING QUERY + RESULT

Where Status = Failed

```
36
37 //CREATE A FAILURE MONITORING QUERY : STATUS IS FAILED
38 SELECT DISTINCT *
39 FROM data_operations_demo.monitoring.daily_uploads
40 WHERE status = 'Failed';
41 --I to generate
```

Aggregation Sum

FILE_NAME	RECORD_COUNT (sum)
investments_0514.csv	1,850
transactions_0514.csv	3,520
clientdata_0514.csv	890
cashbalances_0514.csv	670
accounts_0514.csv	1,240
useraccounts_0514.csv	2,140
Grand total	10,310

Found error: Duplicate records in table due to re-running the “insert data to table query” multiple times.

The correct total loaded records is 10,310.

To fix:

Check for duplicates first, then
Reset the table cleanly / delete data and re-insert all over again.

CHECK FOR DUPLICATES

94 SELECT * FROM data_operations_demo.monitoring.daily_uploads;

FINDINGS: Confirmed duplicate records. The original total data inserted is 10, now it’s 30. Meaning it has been duplicated twice.

FIX OPTION 1: DELETE AND RE-INSERT ALL.

97

98 //IF DUPLICATES FOUND, DELETE ALL

99 DELETE FROM data_operations_demo.monitoring.daily_uploads;

100

101 //RE-INSERT DATA IN TABLE

102 INSERT INTO data_operations_demo.monitoring.daily_uploads

103 (file_name, upload_date, source_system, status, record_count, notes)

104

105 VALUES

106 ('accounts_0514.csv', '2026-05-14', 'Custodian System', 'Success', 1240, 'Complete'),

107 ('portfolio_0514.csv', '2026-05-14', 'Portfolio PMS', 'Failed', 0, 'Missing file'),

108 ('transactions_0514.csv', '2026-05-14', 'Bank Feed', 'Success', 3520, 'Complete'),

VERIFIED! IT'S STILL 10, 310.

KEY LEARNINGS FROM THE ERROR:

This experience helped me understand the importance of:

- Validating datasets before performing calculations
- Monitoring duplicate records in operational databases
- Carefully managing SQL execution workflows
- Testing queries step-by-step during troubleshooting
- Most importantly, it highlighted that data work requires both precision and patience. Errors are not setbacks but signals - pointing to inconsistencies that need to be understood and resolved. With a calm and systematic approach, every issue can be traced back to its source and corrected effectively.
